\*The Equality of Opportunity Project granted permission to the Higher Education Benchmarking Institute (NHEBI) to include their data in the NHEBI study this year. Visit [www.equality-of-opportunity.org](http://www.equality-of-opportunity.org) for the full paper, college-level data, and more information. Principle researchers are Raj Chetty, John N. Friedman, Emmanuel Saez, Nicholas Turner and Danny Yagan. The data were collected from federal government sources covering all students from 1999-2013. The data reports estimates of both parents' household and children's individual income distributions by college for children who attended college between ages 19 and 22 in the early 2000s. Because of the ages selected, these are the more "traditional" students that attend your institution. The college each child attends was defined as the institution the child attended most frequently during four calendar years in which the child turned 19-22. The study calculated college-level values as student means in the 1980, 1981 and 1982 birth cohorts. When data for a college from any of these cohorts were incomplete, data from the 1983 and 1984 cohorts were used to obtain an estimate. An interactive tool based on the longitudinal data base (Overall Mobility Index) is available at <https://www.nytimes.com/interactive/projects/college-mobility/>.
